

Prepared by the Defense Mapping Agency Topographic Center, Washington, D. C. Compiled in 1954 by photogrammetric methods and from 1:24,000 and 1:62,500-scale maps dated 1947-51. Planimetry revised from aerial photographs taken in 1953. Photographs field annotated 1954. Revised by the U. S. Geological Survey from aerial photographs taken 1978 and other source data. Revised information not field checked. Map edited 1978.

Area covered by dashed light-blue pattern is subject to controlled inundation 100,000-foot grids based on Arizona coordinate system, east and central zones.

Location of geodetic control established by government agencies is shown on corresponding 1:250,000-scale Geodetic Control Diagram.

There may be private inholdings within the boundaries of the National or State reservations shown on this map.

**LEGEND**

Figures in red denote approximate distances in miles between stars.

**POPULATED PLACES**

- Over 500,000
- 100,000 to 500,000
- 25,000 to 100,000
- 5,000 to 25,000
- 1,000 to 5,000
- Less than 1,000

**ROADS**

- Standard gauge
- Narrow gauge
- Landplane airport
- Landing area
- State
- County
- Park or reservation

**RAILROADS**

- Single track
- Double or multiple track
- Landplane airport

- County
- Park or reservation

**BOUNDARIES**

- International
- State
- County
- Park or reservation

**Other Symbols**

- Mine
- Landmark: School; Church; Other
- Spot elevation in feet
- Marsh or swamp
- Intermittent or dry stream
- Power line

**GRID ZONE DESIGNATION**

180000 N SQUARE IDENTIFICATION

TO GIVE A STANDARD REFERENCE ON THIS SHEET TO MARKET LOCATIONS

1. Read letters identifying 100,000 meter grid square in which the point lies.

2. Locate first vertical grid line to LEFT of point and read LARGE figure labeling the 100,000 meter grid square.

3. Locate first horizontal grid line below point and read LARGE figure labeling the 100,000 meter grid square.

4. On the line sheet, identify the 100,000 meter grid square.

5. Estimate fraction of distance from grid line to point.

6. Estimate fraction of distance from grid line to point.

7. Add the estimated fraction to the grid line number to give the full coordinate. Use ONLY the LARGE figure of the grid number.

8. If reporting beyond 10' in any direction, give Grid Zone Designation, etc.
